[Reference drawing]

[Features of the design]

[An applicant's description is published as it is and the Patent Office has not examined about the contents. ]

It sees from a transverse plane, a bookshelf is arranged in accordance with a right and left wall in longwise space, and it has the focus at the point which arranges the desk of a longwise rectangle with a column and arranges it to space of the center inserted into the bookshelf. In addition, by arranging the table light and the right and left wall surface light of the louver of a ceiling, and identical shape in parallel with regular intervals, it sees from a transverse plane, the impression that space is linearly extended with depth is given, and the runway in an airport is reminded. A ceiling louver directs the atmosphere where whole space settled down by interrupting the light of lighting directly. A visitor is a long desk with the table light of illumination with a sufficient degree, and he can spend calmly refreshing time which reads the books of a bookstore, drinking coffee.

(55)[Description of article to the design]

This image is an image irradiated to a road surface from vehicles with an image projection device. It makes existence of vehicles easy to irradiate around vehicles the image denoted by the graphic image view at the time of a run or a stop, and to recognize visually from outside as the reference drawings 1 to 3 showing a busy condition.

This image makes the situation of the road surface of a vehicle circumference easy to recognize visually to a driver.

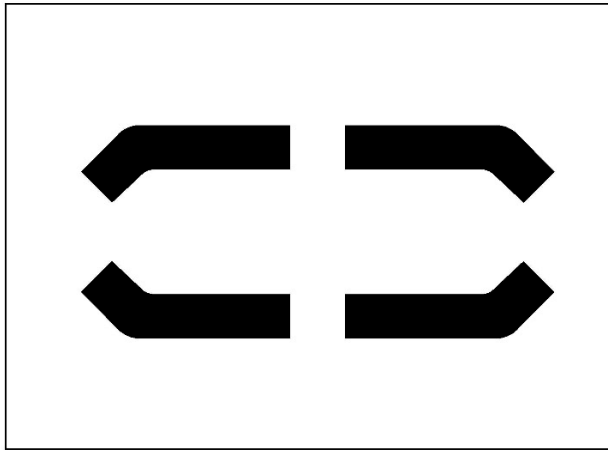

When vehicles change a moving direction, according to for change, it changes and irradiates as a graphic image view and the graphic image views 1 and 2 showing the state where it changed.

(55)[Description of the design]

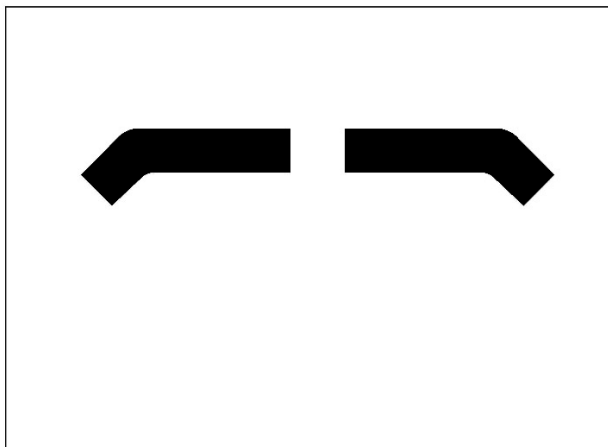

The portion which performed hatching in the reference drawing showing a transparent area is transparent.
